

Three Logo Concepts

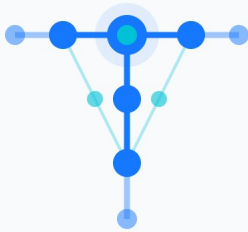

Each concept combines a stylized letter T with traffic flow, data networks, and intelligent mobility to communicate Trafenix's core identity.

CONCEPT 01

T-Junction Data Network

A bold T formed from a road junction with thick dashed lane markings and interconnected data nodes at the intersection. The dark asphalt palette with network graph symbolizes traffic intelligence and connected infrastructure.

CONCEPT 02

Connected Network T

A T-shaped data network with interconnected nodes representing traffic sensors, data points, and flow paths. The central hub radiates intelligence outward. Suggests connectivity, real-time data, and smart infrastructure.

CONCEPT 03

Dynamic Road Flow

Flowing road paths that sweep upward and converge, forming a dynamic symbol of movement and acceleration. Data particles along the paths suggest real-time tracking. Pairs naturally with the TRAFENIX wordmark for a horizontal lockup.
